SUMMARY

Applied Chemistry undergraduate with Google Data Analytics and Google Advanced Data Analytics certifications, hands-on experience across 4 end-to-end machine learning projects, and practical skills in Python, SQL, Power BI, statistics, and data visualization. Seeking a Data Analyst role where analytical skills and machine learning experience can be used to turn business data into actionable insights.

EDUCATION

Al-Azhar University

Cairo, Egypt

B.Sc. Applied Chemistry

Expected Graduation: 2027

CERTIFICATIONS

- | | |
|---|------|
| • Google Data Analytics Certificate (Coursera) | 2025 |
| • Google Advanced Data Analytics Professional Certificate (Coursera) | 2026 |
| • Professional Data Analysis, DEPI (Ministry of Communications and Information Technology) | 2026 |

TECHNICAL SKILLS

- **Programming & Analysis:** Python, Pandas, NumPy, Matplotlib, Seaborn, Exploratory Data Analysis (EDA)
- **SQL:** Queries, Joins, Aggregations, Subqueries, CTEs
- **Machine Learning:** Scikit-learn, XGBoost, Classification, Regression, Feature Engineering, Model Evaluation, NLP / Text Vectorization
- **Statistical Analysis:** Hypothesis Testing, Welch's t-test, Confidence Intervals, Descriptive Statistics
- **Visualization & BI:** Power BI (Dashboards, Data Modeling, DAX Basics), Excel (Formulas, Pivot Tables, Charts)
- **Tools:** Jupyter Notebook, VS Code, GitHub

PROJECT EXPERIENCE

Superstore Sales & Profitability Analysis

Data Analysis Project

- Analyzed sales, profit, quantity, discount, and regional performance across the Superstore dataset.
- Built a Power BI dashboard tracking \$2.30M total sales, \$286.40K total profit, 38K units, and a 12% profit margin.
- Cleaned and prepared the data with Python and Pandas, then used SQL for exploration and analysis.

TikTok | Claims Classification

Google Advanced Data Analytics

- Analyzed 19,382 video records to identify patterns associated with claims, opinions, and engagement.
- Applied text vectorization, statistical analysis, feature engineering, and classification with Logistic Regression, Random Forest, and XGBoost.
- Selected Random Forest as the champion model and translated findings into a content-review prioritization strategy.

Waze | User Churn Prediction

Google Advanced Data Analytics

- Modeled monthly user churn using behavioral features and compared Logistic Regression, Random Forest, and XGBoost.
- Selected XGBoost based on validation recall; the default 0.50 threshold gave a test recall of only 17.16%.
- Tuned the decision threshold to 0.223 to prioritize catching churners: test recall rose to 52.47% and F1 to 42.66%, with precision trading off from 45.55% to 35.95%.

Automatidata | NYC Taxi Fare & Tipping Analysis

Google Advanced Data Analytics

- Tested fare differences between credit-card and cash trips using Welch's t-test and a 95% confidence interval; the observed mean difference was \$1.22.
- Built leakage-aware route features and compared Linear Regression, Random Forest, XGBoost, and Gradient Boosting for fare prediction.
- Selected Gradient Boosting by validation MAE and achieved a \$3.55 test MAE; also evaluated generous-tipping classification with Random Forest.

Salifort Motors | Employee Turnover Prediction

Google Advanced Data Analytics

- Analyzed 14,999 employee records; 11,991 unique records remained after duplicate removal for the main analysis.
- Engineered an overworked feature and compared Logistic Regression, Decision Tree, and Random Forest models.
- The final engineered Random Forest achieved 96.5% accuracy, 86.4% recall, 89.2% F1-score, and 96.1% AUC on the untouched test set.
